Kaduna State, Nigeria

EDUCATION

AHMADU BELLO UNIVERSITY

Zaria, Kaduna State, Nigeria
B.Eng. Computer Engineering
Jan 2020 – 2026 (Expected)

Coursework: Data Structures & Algorithms, Computer Networks, Robotics, Control Engineering, IoT, Web Programming, Embedded Systems.

Final-year research: Design And Prototyping Of An Autonomous Uav-Based Victim Detection And First Aid Instruction System For Flood Disaster Response In Nigeria.

SKILLS

FRONTEND

React.js · Next.js · JavaScript (ES6+) · TypeScript · HTML5 / CSS3 · Tailwind CSS · Redux · React Query · Framer Motion

BACKEND

Node.js · Express.js · REST APIs · WebSockets · JWT / OAuth 2.0 · Mongoose · MVC / Microservices

DATABASE & CLOUD

MongoDB · PostgreSQL · MySQL · Redis · Firebase · Vercel / Railway · Docker

TOOLS & WORKFLOW

Git & GitHub · CI/CD Pipelines · Jest / Vitest · Postman · Linux / Bash · Agile / Scrum · Webpack · VS Code

ABOUT

Detail-oriented Full Stack Web Developer with a strong command of the MERN stack from architecting RESTful APIs and designing efficient database schemas to building responsive, performant user interfaces. Experienced in delivering end-to-end web solutions across multiple domains, with a product mindset that bridges technical precision and real-world business impact. Currently completing a B.Eng. in Computer Engineering at Ahmadu Bello University (Class of 2026). Open to full-time, contract and remote opportunities, available immediately.

EXPERIENCE

BACKEND DEVELOPER

Spirit Elf, New York · Contract · Remote | Mar 2026 – May 2026

- Built and maintained server-side services and logic on a three-month contract engagement with a US-based team.

FOUNDER & LEAD INSTRUCTOR

Genesis Engineer · Kaduna, Nigeria | 2025 – Present

A hands-on tech tutoring program where students build and ship real applications rather than follow along with tutorials.

- Designed the curriculum across five tracks - Web Foundations, Frontend Engineering, CAD & Modelling, Product Design, and Agentic AI.
- Trained and mentored 7+ junior developers to a 90% project completion rate; second edition launching September 2026.

WEB DEVELOPER

PolishMahNails · Contract · Remote | 2026

- Designed and delivered the full business website services presentation, booking enquiries, and a mobile-first responsive layout.

FREELANCE FULL STACK DEVELOPER

Client Projects · Kaduna, Nigeria | 2022 – Present

- Delivered 8+ production web applications for SME clients e-commerce stores, business portals and landing pages all with Lighthouse scores above 90.
- Integrated third-party APIs (Google Maps, Flutterwave, Sendgrid, Cloudinary) using reusable integration modules.

SELECTED PROJECTS

SIGNET - TRUSTWORTHY E-SIGNATURE PLATFORM

Full-stack SaaS for sending, signing and sealing legally credible documents. An owner uploads a PDF, drags signature and data fields onto it, assigns each to a recipient and sends identity-bound invites; every action is sealed with a tamper-evident hash and a full audit trail, and the final sealed document ships with an appended signing certificate.

STRENGTHS

Problem Solver · Systems Thinker · Technical Mentor · Team Lead · Fast Learner · Detail-Oriented · Self-Driven · Product-Minded

Stack Next.js · React · TypeScript · Node.js / Express · MongoDB · pdf-lib & pdf.js · Paystack · encrypted document storage

Highlights Tokenized signing links with one-time-passcode verification · tamper-evident sealing and per-action audit trail · parallel and sequential signing flows · server-enforced billing gate with idempotent webhooks

EXPLAIN-IT-BACK - LEARN BY TEACHING

An AI learning tool built on the Feynman technique: you explain a topic to a deliberately confused AI student whose naive questions expose the gaps in your understanding. Each session converts into a structured PDF study sheet before it self-destructs.

Stack Next.js · React · TypeScript · Node.js · MongoDB (TTL index) · LLM API · server-side PDF generation

Highlights Dual-AI architecture separating character (student) from rigor (evaluator) · adjustable mid-session difficulty against a fixed grading standard · conversation-to-PDF synthesis · ephemeral, no-account sessions

SEALED - ANTI-ANCHORING GROUP DECISIONS

A web app that kills groupthink by making everyone commit before anyone can be influenced. Participants answer privately and nothing is visible until the whole group has submitted then every response reveals at once, attributed by name.

Stack Next.js · React · TypeScript · Node.js · MongoDB (TTL index) · polling-based live reveal

Highlights Commit-then-reveal with server-side hidden responses · per-participant seat tokens for counting without accounts · auto-reveal at threshold plus organizer force-reveal · TTL-based room self-destruct
